Tamper Evidence

Tamper Evidence

EU Directive 2011/62/EU requires that the secondary packaging for prescription drugs be equipped with a tamper verification feature. Rondo-Pak's innovative folding box offers tamper evidence that is directly integrated into the carton construction. Therefore, there's no need for glue or labels to implement first opening verification. The Rondo-Pak folding carton remains reclosable at any time. The Rondo-Pak solution stands out as one of ingenious simplicity and efficiency. With this folding box machine speed of the packaging line remains unaffected which guarantees an optimal OEE (Overall Equipment Efficiency).

Advantages

- The perforated flaps in the lid clearly indicate first opening of the folding box (acc. to DIN EN 16679).
- Neither glue nor labels are necessary for first opening verification.
- Packaging performance is unaltered.
- OEE is maintained and superior to solutions with glue or labels.
- Opening and reclosing is as easy as with conventional folding boxes.
- The machine runability was successfully tested on machines of several manufacturers.
